

Billing in the Snelson Server CRM

A practical guide: from contract lines to invoices in Xero, with every screen along the way

Version 2 · October 2026 · Screens taken from the demo data, so names and figures are illustrative.

Xero remains the system of record for issued invoices, payments and balances. The CRM calculates, explains and prepares; it creates **draft** invoices in Xero and never authorises or sends them.

Contents

1. How billing works, in one page
2. Setting a customer up to be billed
3. The monthly run: Prepare, Approve, Issued
4. Reading a draft and the customer schedule
5. Handling changes during a period
6. Needs attention: everything to decide, in one list
7. Services: what the integrations supply, and what bills it
8. Renewals and price reviews
9. Invoices and supplier bills
10. Automation, in stages
11. One customer at a glance: the company Billing tab and the Customers list
12. Roles, audit and where things live
13. Quick answers

1. How billing works, in one page

Everything about money sits under one sidebar entry, **Billing**. Its left-hand navigation is ordered the way the month flows.

Section	What it is for
Needs attention	Everything a person should look at, from every check, in one list: unmatched provider accounts, unmapped services, duplicates, count differences, quantity changes to approve, supplier cost changes, stale data, drafts, invoices changed in Xero, supplier bills and renewals. Filter by group or customer; every row opens where it is dealt with.
Customers	One row per customer: agreements, next invoice, charge per month, supplier cost, margin, how many lines the integrations supply, and whether anything needs attention.
Monthly run	Three steps as tabs: Prepare (what is due and what changed), Approve (drafts to Xero), Issued (created in Xero, and anything changed in Xero afterwards).
Services	The service register: every subscription, hosting item and device the integrations report, with the supplier product, quantity, cost, last sync and the line that bills it.
Renewals & pricing	The renewal queue with supplier commitment exposure, and the price review tool.
Invoices	The Xero sales mirror (outstanding, overdue, paid) and the Pax8 supplier bill reconciliation.
Automation	The staged automation policy in Settings.

The chain

1. **Contract lines** say what a customer pays for: description, quantity, unit price, billing frequency, and for each line an invoice schedule, a reduction policy and a **quantity rule** (fixed or synced).
2. Each integration (Pax8, 20i, NinjaOne) reports what it **supplies** to each customer. A **service link** ties each supplied service to the contract line that bills it, or records that it is bundled, covered, free or internal. Supplier cost comes through the same link.
3. The **billing engine** works out, for a run date, which line periods are due and not yet invoiced and what each costs, including pro-rated additions, credits and catch-ups from dated changes.
4. The **Monthly run** shows one row per contract with the proposed amount, the previous invoice and plain-language reasons for any difference. Ticked rows become CRM **drafts**.
5. Drafts are reviewed and **approved**; approval creates the invoice in Xero as a DRAFT with a reference back to the CRM.

6. Finance approves and sends from Xero. Payments and status changes flow back and appear under Invoices.
7. Between runs, **Needs attention**, **Services** and **Renewals** keep the next run clean.

Nothing an integration reports becomes a customer charge by itself. A supplied service is billed only through a contract line; a changed count only changes an invoice once a person records (or approves) the dated change. Historical invoices never move when provider data changes.

WHAT	CUSTOMER	DETAIL	AT STAKE	
Charge due but not drafted	Greenfield Primary Academy	Managed IT & Safeguarding Agreement: 12 line periods due, 8 missed 2026-09-26 to 2026-10-25	£11,871.00	Open
Renewal decision overdue	Bramley & Sons Accountants	Managed IT Agreement: decision was due 2026-04-22 Microsoft 365 Business Premium: the agreement renews on 2026-08-20 but the supplier commitment runs to 2026-10-26 (= £410.85 for 3 months beyond it)	£410.85	Open
Renewal decision overdue	Harrowgate Dental Practice	Managed IT Agreement: decision was due 2026-07-31 Microsoft 365 Business Standard: the agreement renews on 2026-11-28 but the supplier commitment runs to 2027-04-22 (= £658.00 for 5 months beyond it)	£658.00	Open
Provider account not matched to a customer	Pax8	Pax8 company "Moorland Outdoor Supplies" Link it to a CRM company on Integrations → Pax8	—	Open
Provider account not matched to a customer	NinjaOne	NinjaOne organisation "Internal - Snelson Server"	—	Open

Billing → Needs attention. The strip says where the month stands; the list is ordered by urgency: red is now, amber is this run. The chips filter by group; every row opens where it is resolved.

2. Setting a customer up to be billed

2.1 Link the company to its Xero contact

A draft can be prepared without the link but cannot be approved. Go to Integrations → Xero → Mapping, or follow the red "Link this customer to its Xero contact" action on the company's Billing tab. The link is one to one: a Xero contact can belong to only one CRM company.

2.2 Give the contract the right terms

On the contract (Contracts & Services → the agreement → Edit):

- **Start date** and **billing frequency** anchor the periods. A **billing day** (1 to 28) anchors them to that day of the month instead; a start part-way through a period is pro-rated.
- **Bill from (CRM)** is the billing commencement in the CRM. Periods from this date with no draft are proposed as *missed*. Leave it empty for a contract imported mid-life so nothing earlier is back-billed.
- **Renewal date** and **notice period** drive the renewal queue; **Prices fixed until the renewal date** stops a price review changing this customer before then.
- **Customer PO reference** is copied onto every invoice drafted from the agreement and sent to Xero on the first line.

Alex Admin Administrator

The contract form. The lines editor at the bottom carries each line's invoice schedule and reduction policy; "Changes take effect from" dates any quantity or price change you make.

Snelson Server CRM · Billing guide · page 6 of 35

2.3 Lines: schedule and reduction policy

Setting	Meaning
Invoice schedule: <i>With the contract</i> (default)	The line's price is spread over the contract's invoices. An annual £120 domain on a monthly contract bills £10 a month.
Invoice schedule: <i>On its own cycle</i>	The line is invoiced once per its own period, anchored like the contract. A domain renewed yearly is billed once a year, in full.
Reduction policy: <i>Next period</i> (default)	A lower quantity applies from the next period; nothing is credited inside the current one.
Reduction policy: <i>Immediate</i>	The unused days are credited as a negative line (and as a catch-up if the period was already invoiced).
Reduction policy: <i>At renewal</i>	The old quantity is billed until the contract's renewal date.
Quantity rule: <i>Fixed</i> (default)	The agreed quantity bills. If Pax8, 20i or NinjaOne supply a different count, that is an exception for a person to decide (amend, reduce at renewal, bundle, accept, dismiss).
Quantity rule: <i>Synced</i>	The integrations' count is what should be billed. A different count is a <i>quantity change to approve</i> ; one approval records it as a dated change from the day it changed, and the next invoice pro-rates it. Nothing changes until approved.

2.4 Say which line bills each supplied service

On the company's **Billing** tab, each agreement line shows *Supplied by*: which integration supplies it and how many. Services the integrations report that no line accounts for are listed below the agreements under **Supplied but not on an active agreement**, unmapped ones first. For each, pick the line in *Billed on*, or use *Not charged?* to record that it is bundled into another line, covered by a commitment, intentionally free (with a review date) or internal.

Matching by rule happens at sync time and is recorded, so you can see *how* a service came to be on a line: chosen by a person, matched by catalogue SKU, matched by product name, or the per-device rule (lines marked "compare with NinjaOne" take the billable device count). A person's choice is never overwritten by a sync.

Draft invoices awaiting approval (1)

REFERENCE	COMPANY	SOURCE	NET	PREVIOUS	REVIEW	PREPARED
☐ CRM-3A8194EC Managed IT & Safeguarding Agreement — monthly...	Greenfield Primary Academy	Managed IT & Safeguarding Agreement	£4,016.29	—	needs review stale Contract changed after this draft was prepared First invoice from the CRM for this contract	3 days ago

0 unchanged drafts selected · £0.00 net
Unchanged = same contract lines, quantities and prices as the previous invoice, Xero linked, contract not changed since. Each is re-checked at approval; anything that changed meanwhile is skipped.

Approve 0 in Xero

Company → Billing: services the integrations supply that no agreement line accounts for yet, each with the line picker and the coverage dialog.

3. The monthly run: Prepare, Approve, Issued

The run is safe to repeat. A line period that already has a draft is never proposed again, whichever draft carries it.

Step 1: Prepare

Billing → Monthly run → **Prepare**. Pick a run date (today by default). The summary line says how many contracts are ready, need review or are blocked, the expected billing total, potential missed revenue across unmapped services, and renewals and notice deadlines this week.

Each row shows the customer and agreement, the period, the **proposed** net, the **previous** comparable draft (linked), the difference, and a status:

- **Ready**: Xero linked, same amount as the previous invoice, nothing open for the customer. Ticked by default.
- **Needs review**: something deserves a look: a changed amount with its reasons, an open discrepancy, an unmapped service, Pax8 or NinjaOne data not fetched for three hours, missed periods, or a first invoice from the CRM. Tick after reading the reasons.
- **Blocked**: the company has no Xero link, so the draft could not be approved. Cannot be ticked.

Open the *why* toggle on a row to see the reasons. They are read from the calculated lines against the previous draft, never guessed: "Users: 10 → 12", "price £40.00 → £42.00 per unit", "2 added from 14 Oct, pro rata (£10.92)", "Includes 2 missed periods".

Leave **One draft per customer** ticked to get a single consolidated draft when several agreements of the same customer are due. Click **Prepare drafts**.

Unchanged = same contract lines, quantities and prices as the previous invoice, Xero linked, contract not changed since. Each is re-checked at approval; anything that changed meanwhile is skipped.

Approve 0 in Xero

Approving creates the invoice in Xero as a **draft**; it is never authorised or sent by the CRM. Each draft page carries the customer explanation and a printable schedule.

Step 2, Approve. Unchanged drafts can go together; exceptions keep the one-by-one review.

Step 3: Issued

Billing → Monthly run → **Issued** lists what was created in Xero, with the Xero invoice number and a link to each customer schedule. If an invoice is changed, voided or deleted in Xero after approval, it appears at the top against the approved version. From here on, approve and send from Xero; payments come back through the hourly sync and webhooks.

CRM-B581915B	Northern Freight Solutions Ltd	INV-1001	£3,009.20	10 days ago	Customer schedule

Approve and send from Xero. Payments and status flow back through the hourly sync and webhooks into [Invoices](#).

Step 3, Issued.

4. Reading a draft and the customer schedule

A draft page has the lines (editable until approval), **What the customer sees** (one paragraph derived from the calculated lines), **How these amounts were calculated** (one explanation per line: the quantity on the first day, each addition for its remaining days, credits, catch-ups), the details (dates, period, PO reference, Xero contact) and the approval controls.

If the contract changed after the draft was prepared, a **stale** notice lists the changes since and offers **Re-prepare from the contract**: the old draft is cancelled, its periods and changes are handed back, and a fresh draft is prepared for the same stretch.

SUPPORTING SCHEDULE

Managed device (RMM + patching)

- 92 billable devices at NinjaOne × 92

As recorded at the time this schedule was produced.

YOUR AGREEMENT

Managed IT & Safeguarding Agreement: renews 26/06/2027 (notice by 28/03/2027), renews automatically

The customer schedule for a draft.

Preparing one invoice by hand

On a contract page, **Prepare invoice** opens a dialog with the period. The calculated lines, net and any already-drafted periods are shown before anything is created, so a partial period or a double-up is visible up front. A hand-typed period that is not an anchored one is pro-rated like any other partial period.

Managed device (RMM + patching) (2026-10-01 to 2026-10-31) £1,020.00

Security awareness training (2026-10-01 to 2026-10-31) £150.00

Managed firewall (2026-10-26 to 2026-11-25) £65.00

Net £4,016.29

Already drafted: Managed IT (per user) (2026-10-01 to 2026-10-31); Managed device (RMM + patching) (2026-10-01 to 2026-10-31); Security awareness training (2026-10-01 to 2026-10-31). Preparing again would bill them twice.

Cancel

Prepare draft

Monthly is what lines are invoiced on their own cycle and shown per quarter or per year. PRK normalised (annual ÷ 12, quarterly ÷ 3, added to the monthly lines) appears only when it differs; it is the forecasting figure used on the Reports page, not a monthly bill. One-off and hardware lines are excluded from both.

Change history (1)

RECORDED	SERVICE	CHANGE	EFFECTIVE	BY / REASON	INVOICED ON
04/10/2026	Managed IT (per user)	60 → 62 qty	04/10/2026	Alex Admin two new starters, requested by Pat	CRM-3A8194EC (draft)

Every dated change on this active contract. The next invoice bills increases pro rata from their effective day; decreases apply from the following period; price changes apply from the next period starting on or after the effective day. A cancelled draft hands its changes back to the next one.

Contract → Prepare invoice: the preview before the draft exists.

5. Handling changes during a period

Every quantity or price change on an active contract is recorded as dated history: the value before and after, the effective day, who made it and why, and the draft that first accounted for it. The engine always calculates from this history, so several changes in one period are each charged for their own days.

How to record a change

1. Open the contract and click **Edit**.
2. Change the quantity or unit price on the line.
3. Set **Changes take effect from** to the day the change applies (the day the users started, not the day you heard). Add a reason.
4. Save. The contract page shows the pending change on the line and the **Change history** card.

Change	What the next invoice does
Quantity up, inside the current period	The period is charged at the quantity on its first day, plus the extra units for their remaining days, pro rata. If the period was already invoiced, the difference is caught up on the next invoice.
Quantity down	Follows the line's reduction policy: from the next period, credited now, or at renewal.
Price change	Applies from the next anchored period starting on or after the effective day. Price changes are never pro-rated.
Backdated change	A change dated inside the previous period produces a traceable catch-up line: what that period should have cost, what was invoiced, the difference.

Cancelling a draft never loses a change: its periods become due again and its changes wait for the next draft.

Contracted services

Monthly £4,025.00 First year £48,300.00 Margin 60%

SERVICE	QUANTITY	SUPPLIED BY	UNIT PRICE	COST / UNIT	MARGIN / MO	STATUS
Managed IT (per user) Recurring · Per user · Monthly	62 fixed	manual entry	£45.00/mo	£18.00/mo recorded	£1,674.00	No integration supplies this
Where the quantity comes from Per month: charge £2,790.00, cost £1,116.00, margin £1,674.00. No integration supplies this line; the quantity is what was agreed and entered by hand. Rule: the agreed quantity bills; a different count from the integrations is an exception to decide. Invoices come from the recorded history, never from a live count.						
Managed device (RMM + patching) Recurring · Per device · Monthly	85 fixed 92 supplied	NinjaOne x 92	£12.00/mo	£4.50/mo recorded	£637.50	Exception accepted
Security awareness training Recurring · Per user · Monthly	60 fixed	manual entry	£2.50/mo	£1.10/mo recorded	£84.00	No integration supplies this
Managed firewall Recurring · Fixed fee · Monthly, own cycle	1 fixed	manual entry	£65.00/mo	£30.00/mo recorded	£35.00	In step
Per month, normalised			£4,025.00	£1,594.50	£2,430.50	

Quantity is what is billed (fixed: as agreed; synced: the integrations' count once a change is approved). Supplied by shows which integration supplies each line and how many; open a line for the source records, the rule and any count check. Cost / unit comes from the supplier where it reports pricing (Pax8), otherwise from the cost recorded on the line; unknown means neither. Monthly is what the monthly invoice carries; MRR normalised (annual ÷ 12, quarterly ÷ 3) is the forecasting figure.

Change history (1)

RECORDED	SERVICE	CHANGE	EFFECTIVE	BY / REASON	INVOICED ON
04/10/2026	Managed IT (per user)	60 → 62 qty	04/10/2026	Alex Admin two new starters, requested by Pat	CRM-3A8194EC (draft)

Every dated change on this active contract. The next invoice bills increases pro rata from their effective day; decreases apply from the following period; price changes apply from the next period starting on or after the effective day. A cancelled draft hands its changes back to the next one.

Terms

START	END
26/06/2026	26/06/2027
RENEWAL	NOTICE PERIOD

A contract page: each line with its quantity rule, what supplies it, unit price, cost per unit, margin and status; a line opened to its source records, rule and count check; then change history, count checks, renewal and terms.

6. Needs attention: everything to decide, in one list

Billing → **Needs attention** is the one queue. Every check the system runs lands here with the same vocabulary, so you never have to visit several pages to find out whether anything is wrong. The chips filter by group; the customer picker narrows to one customer; clicking a label filters to that kind and shows what it means.

Group	Kind	What to do
Matching	Provider account not matched to a customer	A Pax8 company, NinjaOne organisation or 20i item nobody has linked. Link it on the integration page; its services cannot be billed or costed until then.
	Service not mapped to a charge	Possible missed revenue. Pick the line on the company's Billing tab, or record bundled, covered, free or internal.
	Possible duplicate service	The same supplier product appears twice for one customer. Check nothing is charged or supplied twice.
Quantities	Supplied count differs from the agreement	A fixed line. Resolve: amend the line from a date, reduce at renewal, include in a bundle, accept as an exception with an owner and review date, or dismiss. The money consequence is shown first.
	Quantity change to approve	A synced line. Approve to record the new quantity from the day it changed; the next invoice pro-rates it.
	Service covered by a line that cannot charge	The line's contract is not active or its quantity is 0. Fix the contract.
Prices and costs	Supplier cost differs from the recorded cost	Pax8's price changed. Margin already uses the supplier figure; update the recorded cost on the line, and consider a price review.
	Free arrangement past its review date	Decide again: extend the date or start charging.
Data	Integration data is stale	The last successful sync is more than three hours old. Run a sync from the integration page.
Drafts	Customer not linked to Xero	Drafts can be prepared but not approved. Link on Integrations → Xero.
	Draft rejected by Xero / differs from the previous invoice / waiting more than a week	Open the draft: fix and approve, review the reasons, re-prepare or cancel.
	Charge due but not drafted	Run the Monthly run, or set Bill from on the contract. Missed periods are red.
	Drafts the review finds unchanged are not in this list; they are one click on the Monthly run's Approve step.	

Invoices	Invoice changed in Xero after approval / raised outside the CRM	Compare with the approved version on the draft; information for ad-hoc invoices.
Supplier bills	Supplier charge differs / without a customer	Pax8 invoice vs Xero bill, or a charge whose Pax8 company is not linked. See chapter 9.
Renewals	Renewal decision overdue / due	Record the customer's decision or prepare an amendment before the deadline.

WHAT	CUSTOMER	DETAIL	AT STAKE	
Supplied count differs from the agreement NinjaOne	Harrowgate Dental Practice	Managed device (RMM + patching): agreed 18, NinjaOne supplies 19 (+1) ≈ 12 per period unbilled	£12.00	Open
Supplied count differs from the agreement Pax8	Northern Freight Solutions Ltd	Microsoft 365 Business Premium: agreed 32, Pax8 supplies 34 (+2) ≈ 36.2 per period unbilled	£36.20	Open
		Microsoft 365		

Needs attention filtered to the Quantities group: count differences on fixed lines and quantity changes to approve on synced lines, each with the amount per period at stake.

Resolving a count difference

Every row opens the customer's Billing tab with the line expanded. The line shows the agreed and supplied counts and a **Resolve...** button with the options and the money consequence before anything happens:

- **Amend the contract line** to the supplied count from a chosen date: a dated change with a reason, pro-rated by the engine, linked back from the item.
- **Reduce at renewal** (fewer supplied): the lower count, billed at the agreed count until the renewal date.
- **Include in a bundle** (licences): the chosen subscriptions count toward another line instead.

- **Accept as an exception** with an owner, a review date and a reason. It re-opens by itself after the date, or earlier if the gap grows. Accepted exceptions have their own view on Needs attention.
- **Dismiss**: not a billing matter.

The screenshot shows the Snelson Server CRM interface. On the left is a sidebar with navigation links: Dashboard, Companies (selected), Contacts, Sales Pipeline, Proposals, Contracts & Services, Tasks & Onboarding, Devices, Helpdesk, Billing, Reports, Integrations, and Settings. The main area displays a 'Managed IT Agreement' for 'Monthly' with a current period of 28/09/2026 - 27/10/2026 and a next invoice of 28/10/2026. A table lists services, including 'Managed IT (per user)' with a quantity of 14 fixed and a unit price of £45.00/mo. A dialog box titled 'Resolve device discrepancy' is open, showing the discrepancy between contracted (18) and observed (19) devices. The dialog offers three options: 'Amend the contract line to the observed count' (selected), 'Accept as an exception for now (owner and review date)', and 'Dismiss: not a billing matter'. It also shows the 'Effective from' date as 10/07/2026 and the 'Reason' as 'device count agreed with the customer'. A 'Money consequence' section indicates a period of +£8.40 and every period after of +£12.00 from 2026-10-07. The background table also shows 'Microsoft 365 backup' with a quantity of 14 fixed and a unit price of £3.00/mo. The bottom of the screen shows a 'Next invoice' summary and a 'Supplied but not on an active agreement (2)' section.

The Resolve dialog, with the money consequence for this period and every period after.

7. Services: what the integrations supply, and what bills it

Billing → **Services** lists every service the integrations say a customer has: the integration, the supplier product (SKU, package type, device classes), the quantity and cost last synced, when it was synced, its state and the line that bills it, with how that link came about. Filter by state, integration or customer. Only **unmapped** may mean missed revenue; every other state is a recorded decision with a reason or a rule match.

State	Meaning
Charged on a line	A contract line bills it. The register says how: chosen by a person, matched by catalogue SKU, matched by product name, or the per-device rule.
Included in a bundle	Another line pays for it; its quantity counts toward that line in the count check.
Covered by commitment	Part of a commitment already billed; counts toward nothing.
Intentionally free	Deliberately free, with a reason and a review date. Comes back to Needs attention when the date passes.
Internal / non-billable	Our own use; left out of counts.
Needs investigation	Parked with a reason until someone decides.
Unmapped	No decision and no rule match. Potential missed revenue.

Cost is shown where the supplier prices the service (Pax8). 20i and NinjaOne carry no pricing, so their cost reads *not reported*, never zero; record a unit cost on the line if you know it, and the line's margin uses that.

Adding another integration later means one adapter that reports services in this shape; the register, the checks and every screen then work the same way for it.

Billing → Services: the integration, supplier product, quantity, cost, last sync, state and the line that bills each service.

8. Renewals and price reviews

Renewals

Billing → Renewals & pricing → **Renewals** queues every active contract with a renewal date by its **decision deadline**: a configurable lead (Settings → General → Renewal decision lead, 30 days by default) before the notice deadline. Each row sets the customer's renewal against the supplier commitments behind its lines, read from the register, and names the mismatches: "the agreement renews on 31 December but the supplier commitment runs to 30 September (≈ £300 for 2 months beyond it)" or "the supplier commitment renews before the agreement; the cost may change first".

- **Record decision**: renew as is, renew with amendments, or not renewing (with a reason). Kept against that renewal date and audited; cleared if the date moves.
- **Prepare amendment**: opens the contract with "Changes take effect from" set to the renewal date, so the amendment lands as dated history and the invoice preview shows its effect first.

Billing → Invoices → Customer invoices.

Supplier bills (Pax8)

The **Supplier bills** tab compares the Pax8 partner invoices with the purchase bills entered in Xero for the Pax8 supplier contact. Matches are made by reference (strong) or by a unique identical total within ten days (weaker, amber); finance can match or unmatched by hand and a hand decision is kept. Each Pax8 invoice's charge lines are allocated to customers and subscriptions, so an equal total cannot hide a line-level difference. *Import invoices from a date* brings older history in. Nothing is changed in Xero or at Pax8.

Customer invoices

Supplier bills (Pax8)

Pax8 invoices vs Xero bills · 1 total-matched, 1 differ, 1 without a bill, 3 charge findings

Pax8 supplier in Xero

Pax8 UK Ltd

Save and match

Each sync mirrors the recent Pax8 partner invoices and the purchase bills Xero holds for this supplier, then matches them by reference (strong) or by a unique identical total within ten days (weaker, amber). Finance can match or unmatch by hand; a hand decision is kept. Charge lines are allocated to customers and subscriptions separately; a one-line bill is reported as total-matched only. Nothing is changed in Xero or at Pax8.

Imported history: 3 Pax8 invoices from 01/08/2026 to 01/10/2026 · last fetched about 5 hours ago · 1 supplier bill older than the imported history (not a finding until their invoices are imported). The routine sync keeps the last 3 invoices fresh; older invoices stay once imported. Sync settings are on the [Pax8 integration page](#).

Import invoices from

Billing → Invoices → Supplier bills.

10. Automation, in stages

Settings → **Billing automation** holds a three-level policy. It only ever applies the same rules a person applies on the Monthly run and the draft review, and every run is audited naming the policy.

Level	What runs by itself	What stays with people
0 Detect only (default)	Findings, the workspace, the draft review and the renewal queue are kept current.	Everything else.
1 Prepare ready drafts	On the run day each month, drafts are prepared for contracts rated <i>ready</i> .	Review and approval; every review or blocked contract.
2 Prepare, then approve unchanged	As 1, then drafts the review finds <i>unchanged</i> are created in Xero as drafts.	Every exception; authorising and sending in Xero.

The scheduled job runs daily at 07:00 and acts once a month on or after the run day. **Run the policy now** runs it by hand. The last run's summary is shown on the page.

Billing automation policy

Automation moves in stages, from detecting issues to proposing resolutions to preparing drafts to approving the routine ones, and only as far as this policy allows. Each stage uses the same deterministic rules a person uses on the **billing run** and the **draft review**, and every automated action is audited as a system action naming the policy. The CRM never authorises or sends an invoice; that stays in Xero.

Automation level

☒ 0. Detect only

The billing run, findings and draft review are prepared for people to act on. Nothing is created automatically.

☐ 1. Prepare ready drafts

On the run day each month, drafts are prepared for contracts the workspace rates ready (Xero linked, same amount as last time, nothing open). Review and approval stay with finance.

☐ 2. Prepare, then approve unchanged drafts

As above, then drafts the review finds unchanged (same lines as the previous invoice, not stale, Xero linked) are created in Xero as drafts. Exceptions wait for a person. Nothing is authorised or sent by the CRM.

Run day of the month

1

The scheduled run happens once a month, on the first daily check on or after this day (07:00). Contracts anchored to later days are picked up on the next month's run if they are not due yet.

☒ One draft per customer where several agreements are due

11. One customer at a glance: the company Billing tab and the Customers list

Every company page has one **Billing** tab. It answers, on one screen: what are we billing this customer, what does each service cost us, which integration or manual entry supplies it, does the billed quantity match the rule, what changed, and what will the next invoice be.

- **The strip:** charge per month, supplier cost per month (with how many lines have an unknown cost), margin, the next invoice date, the Xero balance and the number of things needing attention.
- **Needs attention** for this customer only.
- **One card per agreement:** frequency, the current period, the next invoice date, the renewal date and what the next run proposes. Each line shows the billed quantity and its rule, *Supplied by*, unit price, cost per unit (from the supplier where it prices the service, otherwise the recorded cost, otherwise *unknown*), margin per month and a status: in step, count differs, quantity change to approve, exception accepted, recorded cost differs from supplier, or no integration supplies this.
- **Open a line** for the source records (product, quantity, cost, last sync, how it matched, a link to the supplier console) with the line picker, the rule in plain words, pending dated changes and the count check with Resolve.
- **Supplied but not on an active agreement:** unmapped services first, each with the line picker and the coverage dialog.
- **Drafts awaiting approval**, then collapsed sections for **Invoices** (balances, history, drafts created from the CRM), **Count checks and renewals**, and **Supplier detail** (the Pax8 and 20i panels, including partner invoices and quantity changes at Pax8).

Next invoice: Managed IT: 2 added from 2026-10-04 pro rata (£66.00): Includes 8 missed periods: First invoice for this contract from the CRM. 3 services

Company → Billing: the strip, the attention list, the agreement with one line opened to its sources, and the services not yet on a line.

The Customers list

Billing → **Customers** is the same picture one row per customer: agreements and frequency, next invoice, charge, supplier cost (unknown where no supplier prices it), margin, how many lines the integrations supply and an attention count. Filter to customers needing attention, with an unknown cost, or supplied without an agreement. Click through to the customer's Billing tab.

From a signed proposal to a contract

When a Better Proposals proposal is signed, the CRM normally drafts the contract itself from the opportunity's lines. If it did not (the proposal was built outside the CRM, or was linked later), the Proposals page shows **Create contract** on every signed proposal without one. With a linked opportunity the full acceptance runs; with only a company linked, a draft contract is created from the proposal's totals for you to replace with the agreed services before activating.

12. Roles, audit and where things live

Action	Who
See Billing, invoices, drafts	finance, admin (finance.read)
Prepare drafts, run the Monthly run, cancel or re-prepare drafts	finance, admin, account manager (invoice.prepare)
Approve drafts into Xero, match supplier bills	finance, admin (invoice.approve)
Edit contracts, record renewal decisions, apply price reviews, map services to lines, create a contract from a signed proposal	finance, admin, account manager (contract.write)
Resolve count discrepancies	finance, admin, account manager (discrepancy.review)
Automation policy, Xero and Pax8 settings	admin

Preparing, editing, approving and cancelling drafts, the billing run, quantity and price changes, discrepancy actions, renewal decisions, price reviews, coverage decisions and every automated run are in Settings → Audit log with actor, entity and details. Customer-visible consequences are posted on the company timeline.

Old addresses (Finance, the billing run, findings, service coverage, renewals, price reviews) redirect into the Billing area, so bookmarks keep working.

13. Quick answers

A customer added two users on the 14th. What do I do? Edit the contract, change the quantity, set "Changes take effect from" to the 14th, save. The next run charges the two for their remaining days and the full quantity from the next period. The customer explanation will say so in plain words.

The licence check says agreed 14, Pax8 supplies 16. Open Needs attention (or the company's Billing tab), open the line, click Resolve, choose *Amend the contract line* from the day the licences were added, and apply. The item closes and the next invoice carries the change. If that line should always follow Pax8, set its quantity rule to *synced*: future differences arrive as a quantity change to approve.

Where does this charge come from? Company → Billing, open the line. *Supplied by* names the integration and the count; the opened line lists each source record with its supplier product, last sync and how it was matched, or says the quantity was entered by hand.

Why is the cost "unknown"? Only Pax8 reports prices. 20i and NinjaOne do not, so lines they supply use the cost recorded on the line, and read unknown until one is recorded. The CRM never invents a cost.

Pax8 changed a price. Needs attention shows "supplier cost differs from the recorded cost" for the line; margin already uses the new figure. Update the recorded cost on the line, then run a price review if the sell price should move.

A draft says "stale". The contract changed after it was prepared. Open it and click *Re-prepare from the contract*.

Two agreements for one customer are due. Can they go on one invoice? Yes: leave *One draft per customer* ticked in step 1. The draft groups the lines by agreement and covers both.

Why is a contract "blocked"? Its company has no Xero contact link. Link it on Integrations → Xero and run again.

A supplier commitment runs past the customer's renewal. It shows in Renewals as a mismatch with the months and cost at stake. Decide before the decision deadline; if the customer leaves, that cost stays payable.

Can the CRM send an invoice? No. It creates drafts in Xero; approving, sending and payments stay in Xero.

What does "potential missed revenue" mean? The partner cost of services nobody has mapped to a line. It is not confirmed billable until someone decides; confirmed gaps (expected charges not drafted, covered services that cannot charge) are listed separately.
